

AMENDMENTS TO THE CLAIMS:

Please amend Claims 11, 16, 21, 26, and 27 as follows:

1 - 10. (Cancelled)

11. (Currently Amended) A method of generating a moving picture file, the method including:

obtaining moving picture data taken by a camera, and information about a kind of a control of the camera corresponding to the moving picture data;

determining a time point where the moving picture data is to be divided, based on the information about the kind of the control of the camera obtained at the obtaining step;

dividing the moving picture data at the time point determined at the determining step; and

generating a plurality of moving picture ~~file~~ files, each including ~~from the~~ divided moving picture data divided at the dividing step.

12. (Cancelled)

13. (Previously Presented) The method according to claim 11, wherein the information about the kind of the control of the camera is information relating to switching of the camera to another camera.

14. (Previously Presented) The method according to claim 11, wherein the information about the kind of the control of the camera is information indicating that one of pan, tilt, and zoom of the camera is being processed.

15. (Previously Presented) The method according to claim 11, wherein the information is one of (a) information relating to a change amount per unit time and (b) movement information indicating movement toward a pre-set position.

16. (Currently Amended) An apparatus for generating a moving picture file, comprising:

an obtaining device for obtaining moving picture data taken by a camera, and information about a kind of a control of the camera corresponding to the moving picture data;

a determining device for determining a time point where the moving picture data is to be divided, based on the information about the kind of the control of the camera obtained by the obtaining device;

a dividing device for dividing the moving picture data at the time point determined by the determining device; and

a generating device for generating a plurality of moving picture file files, each including from the divided moving picture data divided by the dividing device.

17. (Cancelled)

18. (Previously Presented) The apparatus according to claim 16, wherein the information about the kind of the control of the camera is information relating to switching of the camera to another camera.

19. (Previously Presented) The apparatus according to claim 16, wherein the information about the kind of the control of the camera is information indicating that one of pan, tilt, and zoom of the camera is being processed.

20. (Previously Presented) The apparatus according to claim 16, wherein the information is one of (a) information relating to a change amount per unit time and (b) movement information indicating movement toward a pre-set position.

21. (Currently Amended) A computer readable medium which stores a program for executing a method of generating a moving picture file, the method comprising:

obtaining moving picture data taken by a camera, and information about a kind of a control of the camera corresponding to the moving picture data;

determining a time point where the moving picture data is to be divided, based on the information about the kind of the control of the camera obtained at the obtaining step;

dividing the moving picture data at the time point determined at the determining step; and

generating a plurality of moving picture file files, each including from the divided moving picture data divided at the dividing step.

22. (Cancelled)

23. (Previously Presented) The medium according to claim 21, wherein the information about the kind of the control of the camera is information relating to switching of the camera to other camera.

24. (Previously Presented) The medium according to claim 21, wherein the information about the kind of the control of the camera is information indicating that one of pan, tilt, and zoom of the camera is being processed.

25. (Previously Presented) The medium according to claim 21, wherein the information is one of (a) information relating to a change amount per unit time and (b) movement information indicating movement toward a pre-set position.

26. (Currently Amended) A method of generating a moving picture file, the method including:

obtaining moving picture data taken by a camera, and information indicating that a display of the moving picture data is prohibited;

determining a time point where the moving picture data is to be divided, based on the information obtained at the obtaining step, the information indicating that the display of the moving picture data is prohibited;

dividing the moving picture data at the time point determined at the determining step; and

generating a plurality of moving picture file files, each including from the divided moving picture data divided at the dividing step.

27. (Currently Amended) A computer readable medium which stores a program for executing a method of generating a moving picture file, the method comprising:

obtaining moving picture data taken by a camera, and information indicating that a display of the moving picture data is prohibited;

determining a time point where the moving picture data is to be divided, based on the information obtained at the obtaining step, the information indicating that the display of the moving picture data is prohibited;

dividing the moving picture data at the time point determined at the determining step; and

generating a plurality of moving picture file files, each including from the divided moving picture data divided at the dividing step.
